

# 1- Arduino

## Advantages:

- 1- easy to use ( a ready to use circuit, an easy programming language, an easy to use IDE )
- 2- huge amount of resources
- 3- most of us can use it

## Disadvantages:

- 1- costs 300 L.E for Arduino mega
- 2- we won't learn much when using it

## 2- AVR

### Advantages:

- 1- costs about 40 L.E for the chip
- 2- the size could be smaller than Arduino and with the same performance
- 3- we will learn a lot from using it

### Disadvantages:

- 1- we will need some time to learn about it
- 2- we will need to make a pcb

### **3-Tiva-c**

#### **Advantages:**

- 1- higher performance
- 2- we will learn a lot from using it

#### **Disadvantages:**

- 1- we will need much time to learn about it
- 2-

#### **Resources:**

### **MY OPINION :**

I think we should use avr but I suggest using ATmega16A instead of ATmega328P as it has more pins
